Table 1: Corpus Universe: Pakistan National Assembly Parliamentary Debates

Corpus Dimension	**Count**
Archival Document Population	
Total official parliamentary debate PDFs	4,836
Debates with extractable text layer	4,804
Preserved scanned image-only debates	32
Active parliamentary sitting years	66
Constitutional suspension / martial law years	14
Member-Sitting Speech Population	
Total extracted member-sitting passages	228,266
Procedural interjections (< 40 words; excluded from frame)	38,632
Substantive analytical frame (≥ 40 words)	**189,634**
English-language passages	112,349
Urdu-language passages	41,609
Native digital Unicode Urdu (2008–2026)	24,353
Historical print-scanned Urdu (vision-restored)	15,522
Legacy InPage font-corrupted Urdu (vision-restored)	1,734
Bilingual passages	35,676
Parliamentary Sittings Indexed	4,804

Notes: Archival population spans eight decades (1947–2026) across nine constitutional regimes of Pakistan's National Assembly (*Majlis-e-Shoora*). The unit of analysis is the member-sitting passage, aggregating all daily floor contributions by an individual parliamentarian. Passages under 40 words capture brief formal procedural interjections (points of order, seconding motions, roll calls) and are excluded from substantive scoring. The substantive analytical frame ($N = 189,634$) is partitioned into English, Urdu, and mixed-code bilingual discourse ($112,349 + 41,609 + 35,676 = 189,634$). To eliminate historical survival bias, zero degraded speeches are dropped: 15,522 pre-2008 print-scanned Urdu passages and 1,734 proprietary InPage font-corrupted passages are preserved and reconstructed directly from high-resolution (300 DPI) gazette page scans via Multimodal Vision models. Speeches delivered in Bengali during the 1947–1971 legislatures were recorded in official contemporary English translation in the published Hansards and are tracked via parliamentary translation markers.
